BUILDING BLOCKS

- BUILD UP COMPLICATED FILTERS
 - FROM SIMPLE MODULES
 - Ex: FILTER MODULE MIGHT BE 3-pt FIR

GENERAL FIR FILTER

- FILTER COEFFICIENTS {b_k}
 - DEFINE THE FILTER

$$y[n] = \sum_{k=0}^{M} b_k x[n-k]$$

• For example, $b_k = \{3, -1, 2, 1\}$

$$y[n] = \sum_{k=0}^{3} b_k x[n-k]$$

= $3x[n] - x[n-1] + 2x[n-2] + x[n-3]$

MATLAB for FIR FILTER

- yy = conv(bb,xx)
 - VECTOR bb contains Filter Coefficients
 - DSP-First: yy = firfilt(bb,xx)

SPECIAL INPUT SIGNALS

- x[n] = SINUSOID FREQUENCY RESPONSE
- x[n] has only one NON-ZERO VALUE

FIR IMPULSE RESPONSE

- Convolution = Filter Definition
 - Filter Coeffs = Impulse Response

n	n < 0	0	1	2	3		M	M + 1	n > M + 1
$x[n] = \delta[n]$	0	1	0	0	0	0	0	0	0
y[n] = h[n]	0	b_0	b_1	b_2	b_3		b_M	0	0

$$h[n] = \sum_{k=0}^{M} b_k \delta[n-k]$$

LTI: Convolution Sum

- Output = Convolution of x[n] & h[n]
 - NOTATION: y[n] = h[n] * x[n]

POP QUIZ

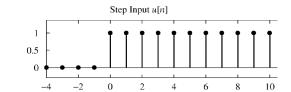

8/22/2003

FIR Filter is "FIRST DIFFERENCE"

•
$$y[n] = x[n] - x[n-1]$$

INPUT is "UNIT STEP"

$$u[n] = \begin{cases} 1 & n \ge 0 \\ 0 & n < 0 \end{cases}$$

15

Find *y*[*n*]

$$y[n] = u[n] - u[n-1] = \delta[n]$$

SYSTEM PROPERTIES

- MATHEMATICAL DESCRIPTION
- TIME-INVARIANCE
- LINEARITY
- CAUSALITY
 - "No output prior to input"

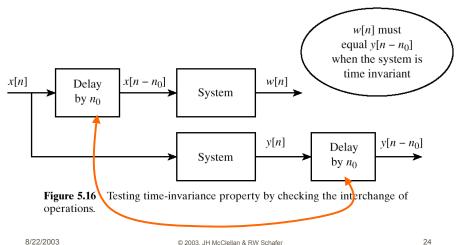

8/22/2003 © 2003, JH McClellan & RW Schafer

TIME-INVARIANCE

- IDEA:
 - "Time-Shifting the input will cause the same time-shift in the output"
- EQUIVALENTLY,
 - We can prove that
 - The time origin (n=0) is picked arbitrary

TESTING Time-Invariance

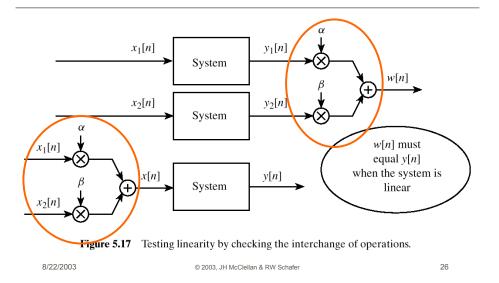

LINEAR SYSTEM

- LINEARITY = Two Properties
- SCALING
 - "Doubling x[n] will double y[n]"
- SUPERPOSITION
 - "Adding two inputs gives an output that is the sum of the individual outputs"

TESTING LINEARITY

LTI SYSTEMS

- LTI: Linear & Time-Invariant
- COMPLETELY CHARACTERIZED by:
 - IMPULSE RESPONSE h[n]
 - **CONVOLUTION**: y[n] = x[n]*h[n]
 - The "rule" defining the system can ALWAYS be rewritten as convolution
- FIR Example: h[n] is same as b_k

8/22/2003 © 2003 JH McClellan & RW Schafer 27

POP QUIZ

- FIR Filter is "FIRST DIFFERENCE"
 - y[n] = x[n] x[n-1]
- Write output as a convolution
 - Need impulse response

$$h[n] = \delta[n] - \delta[n-1]$$

• Then, another way to compute the output:

$$y[n] = (\delta[n] - \delta[n-1]) * x[n]$$

CASCADE SYSTEMS

- Does the order of S₁ & S₂ matter?
 - NO, LTI SYSTEMS can be rearranged !!!
 - WHAT ARE THE FILTER COEFFS? {b_k}

CASCADE EQUIVALENT

• Find "overall" h[n] for a cascade?
